The instructions for this conversion kit are very basic, you are basically just replacing a few parts on your sprint car with the new parts in this conversion kit to turn your sprint car into your new Silver Crown Car. If you have any question on the assembly please reach out to us at support@1rc-racing.com or hit us up on our Facebook page messenger button.

Step 1—Disassemble your sprint car kit all the way down to the frame.

Step 2—Replace the frame parts included with this conversion kit as shown in the image to the right. The rest of the chassis parts from your sprint car will go in the same locations as you removed them from your sprint car frame.

Step 3—Replace the side panels from your sprint car with the new Silver Crown Side Panels.

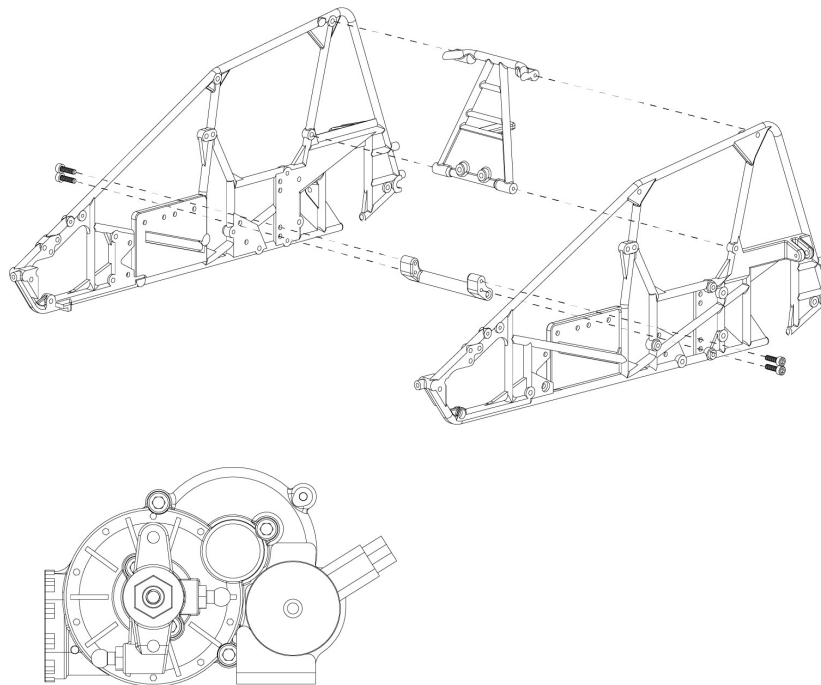

Step 4—Replace the rear bumper from your sprint car with the new Silver Crown Rear Bumper.

Step 5—Trim the new Silver Crown Tail Tank along trim lines and drill top mounting hole. Refer to your sprint car tail for trimming around bottom area where tank snaps on lower cage bar.

Step 6—Replace your sprint car tail tank with the new Silver Crown Tail Tank.

Step 7—Rotate motor as shown in image to the right so motor wire will reach ESC.

Step 8—Complete the rest of the assembly just as your sprint car was assembled and then have some fun with your new Silver Crown Car.
